Heraid, New York. PASCAL IRON WORKS, TASKER IRON WORKS,

Philadelphia, Pa. New Established 1821. Newcastle, Del. MORRIS, TASKER & CO. VULCANIZED

RUBBER-COATED IRON TUBE. Warehouse and Office, Fifth and Tasker sts., Phila. No. 15 Gold st., New York. Office, 29 Pemberton square, Warehouse and Office,

PHILADELPHIA, June, 1873. We desire to call the special attention of the public to Julcanized Rubber-Coated Iron Tube. Also, all the various Fittings required in connection with same, under Finley's Patent, which we have been testing with entire success for the past two years, and are now ready to place on the market, thoroughly satisfied that wherever it may be introduced for the passage of natural waters, either hot or cold, its merits will be acknowledged over either galvanized Iron or Lead Tubes, which are now extensively used for such purpose, and to which, in many article for us.

The price will be the same as for galvanized fron tube and fittings, subject to the most liberal trade discounts.

We are also prepared to supply "Tongs." designed especially for this article, so that it can be screwed up to its place without injuring the coating.

Asking your orders respectfully,

MORRIS, TASKER & CO.

JAMES C. BOOTH. THOMAS H. GARRETT.

BOOTH & GARRETT, 919 and 921 Chant street,

a similar compound to that constituting gums for holding artificial teeth, excepting that yours contains no mercury.

It will bear a high degree of heat, over 300 degrees Fahrenheit, as might be interred from its having been prepared at above 300 degrees. It was not affected by boiling for several hours in schuyikill water. City gas passing through it for about three days appeared to have no effect on it.

The rubber coating resisted firmly carbonic acid water, moderately dilute suphuric and murinitic acids and caustic potash solution. Solutions of neutral saits have.

Since the rubber coating exhibited such firm resistance to acids, aik ait, sait and neat, it is clear that it will offer a still stronger resistance to all natural waters, in which some of the above ingredients are found in a less exaggerated, i. e., in a more disute state.

In fine, we congratulate you for finding a coating for iron tubes and articles of iron generally, which is so unsually resistant to any of the sual agents of the chemits, and to those ordinary agents which so affect iron coated with other materials in a greater or less degree, Respectfully yours, BOOTH & GARRETT.
